OM nucleic - nucleic search, using sw model

Run on: July 23, 2002, 12:19:36 ; Search time 54.54 Seconds (without alignments) 7214.978 Million cell updates/sec

Title: Perfect score: US-09-722-377-2 1602

Scoring table: OLIGO\_NUC Gapop 60.0 , Gapext 60.0

atgtcggacaaaaaaggggt.....tttccttcagccagggatga 1602

Sequence:

Searched: 383533 seqs, 122816752 residues

Word size : 300

Total number of hits satisfying chosen parameters:

0

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                 C.I. 16151 (Mla6) plants were greenhouse grown in the R Wise lab at Iowa State University, Ames, IA; 7 day old green seedlings were challenged with isolate 5874 (AvrMla6) of Blumeria graminis f. sp. hordel, and leaves were harvested 20 and 24 hr post-inoculation and snap frozen; uninoculated leaves were harvested 20 hr post-inoculation (Wei, Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Choi, Close). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum Palmer, Frisch, Atkins and Wing). Plasmid DNA personned at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of

C.I. 16151 (Mla6) plants were greenhouse grown in the R
Wise lab at Iowa State University, Ames, IA; 7 day old
green seedlings were challenged with isolate 5874 (AvrMla6
green seedlings were challenged with isolate 5874 (AvrMla6
) of Blumeria graminis f. sp. hordei, and leaves were
harvested 20 and 24 hr post-inoculation and snap frozen;
uninoculated leaves were harvested 20 hr post-inoculation
(Wei, Wise). In the TJ Close lab at the University of
California, Riverside, total RNA was prepared from each
sample pool, equal quantities of all three RNA pools were
combined, poly(A) RNA was purified from the mixture, one
primary unamplified cDNA library was made, and 1 million
pfu were in vivo excised to give pBluescript SK(-) cDNA
phagemids (Choi, Close). Phagemids were plated and picked
at the Clemson University Genomics Institute (CUGI) (Begum
, Palmer, Frisch, Atkins and Wing). Plasmid DNA
preparations, DNA sequencing and sequence analysis were
performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates
, Rambo, Main). The sequence has been trimmed to remove
vector sequence and contains a minimum of 100 bases of
phred value 20 or above. For more details on library
preparation and sequence analysis see

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB seq

A;Title: Sequence and analysis of chromosome 2 of the plant Arabidopsis thaliana.
A;Reference number: A84420; MUID:20083487
A;Accession: B84552
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-580 <STO>
A;Cross-references: GB:AE002093; NID:g6598336; PIDN:AAB86520.2; GSPDB:GN00139
C;Genetics:
A;Gene: At2g17430
A;Map position: 2
C;Superfamily: barley pathogen resistance protein Mlo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence is that of the MLO gene, wild-type Mlo exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen. Down-regulation or out-competition of Mlo function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with encoded polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1602 BP; 336 A; 488 C; 466 G; 312 T; 0 other;

                  The sequence is that of the MIO gene, wild-type MIO exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen. Down-regulation or out-competition of MIO function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with encoded polypeptide.

                                                                                                                                                                                                                                                                                                                                                                   The sequence is that of the MIO gene, wild-type Mlo exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen. Down-regulation or out-competition of Mlo function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance response in transgenic plants conferring increased pathogen resistance especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with encoded polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated Mlo gene of barley - used to develop products for the production of transgenic plants which have increased pathogen resistance

```

The sequence is that of the MIO gene, wild-type MIO exerts a n regulatory function on a pathogen defence response, such that exhibit a defence response in the absence of pathogen. Down-r or out-competition of MIO function may be used to stimulate a response in transgenic plants conferring increased pathogen re especially resistance to powdery mildew or rust. The product c be used for identifying compounds able to stimulate a defence in a plant by interaction with encoded polypeptide.

New isolated Mio gene of barley - used to develop products for the production of transgenic plants which have increased pathogen resistance % \left( 1\right) =\left\{ 1\right\}
```

Disclosure; Fig 6; 150pp; English.

The sequence is that of a homologue of the MLO gene, wild-type Mlo exerts a negative regulatory function on a pathogen defence response, such that mutants exhibit a defence response in the absence of pathogen. Down-regulation or out-competition of Mlo function may be used to stimulate a defence response in transgenic plants conferring increased pathogen resistance, especially resistance to powdery mildew or rust. The product can also be used for identifying compounds able to stimulate a defence response in a plant by interaction with encoded polypeptide.
